

User-friendly Summary of Test Results for the *elita* CT700 *performed by:*

All test results are certified and performed in NELAP accredited labs to proper EPA Standards.

Abstract: All tests performed were done in manner to replicate the flow rates and contact times of AlkaViva ionizers with a flow rate of 3 liters per minute. No ionizers, or form of electrolysis was used in testing.

All control water samples, influent samples, were created using DI water then spiked with contaminant samples from ERA Labs (<http://www.eraqc.com>) and scanned separately for accurate starting values without passing through UltraWater filters.

All filters were flushed prior to testing using 10 gallons of DI water, than cleared of excess water by air. Prior to collection approximately 2 liters of control water sample was passed through and the effluent samples were collected at this time.

Testing for a sample group of heavy metals, disinfectants, anions group were performed by Silver State Labs on October 24, 2014. VOC testing was managed by Silver State Labs and performed under contract by Anatek Labs on October 1, 2014. PPCP (Pharmaceuticals and Personal Care Products) testing was managed by Silver State Labs and performed under contract by Eurofins Labs September 19, 2014. Glyphosate testing was performed by eurofins / Eaton Analytical on 4/14/16 using the UltraWater Filtration System only. Original lab reports available upon request.

Test Result Definitions:

Influent = The levels found in the control sample prior to passing through the UltraWater Filtration System.

Effluent = The levels found in the collected sample after passing through the UltraWater Filtration System.

mg/L = Milligrams per liter, or Parts Per Million (PPM)

ug/L = Nanograms per Liter, or Parts Per Billion (PPB)

ND = Nondetectable levels were found in testing. ND is an indicator if the lowest level of accurate reporting based on the equipment's capabilities and the type of tests performed.
